<b>Foreword</b>	<b>The Plastics Pipe Institute Handbook of Polyethylene Pipe</b>	
<b>Chapter 1</b>	<b>Introduction</b>	5
	Features and Benefits of PE Pipe	6
	References	13
<b>Chapter 2</b>	<b>Inspections, Tests and Safety Considerations</b>	
	Introduction	15
	PE Piping in the Field	16
	Packaging for Commercial Transport	16
	Receiving Inspection	18
	Checking and Inspecting the Order	19
	Receiving Report & Reporting Damage	19
	Field Handling	20
	Handling Equipment	21
	Unloading Site	22
	Unloading Bulk Packaged Pipe, Fittings and Fabrications	22
	Unloading Large Fabrications, Manholes and Tanks	22
	Pre-Installation Storage	22
	Pipe Stacking Heights	23
	Exposure to UV and Weather	24
	Cold Weather Handling	25
	General Considerations Before and During Installation	25
	Pre-Construction	25
	Joining and Connections	25
	Cleaning Before Joining	27
	Field Fusion Joining	27
	During Construction and Installation	28
	Damage Inspections	28
	Butt Fusion Joint Quality	28
	Soil Tests	29
	Deflection Tests for ID controlled Pipes	30
	Post Installation	32
	Leak Testing – Considerations for All Procedures	32
	Pressure System Leak Testing – Hydrostatic	34
	Pressure System Leak Testing – Pneumatic	35
	Pressure System Leak Testing – Initial Service	36
	Non-Pressure System Leak Testing	37
	Non-Testable Systems	37
	Considerations for Post Start-Up and Operation	37
	Disinfecting Water Mains	37

Cleaning	38
Squeeze-Off	38

### **Chapter 3 Material Properties**

Introduction	43
PE Plastics	45
History of PE	46
Manufacture of PE	46
Polymer Characteristics	47
Density	47
Crystallinity	48
Molecular Weight	50
Effect of Molecular Weight Distribution on Properties	53
PE Piping Materials	55
Structural Properties	56
PE Pipe Material Designation Code Identifies the Standard Classification of Essential Properties	56
Stress/Strain Response and its Representation by Means of an Apparent Modulus	57
Apparent Modulus Under Compressive Stress	63
Stress/Fracture Behavior and the Determination of Working Strength	64
Establishing a PE's Long-Term Hydrostatic Strength (LTHS) and its Derivative, The Hydrostatic Design Basis (HDB)	66
Compensating for the Effect of Temperature on Working Strength	72
Compressive Strength	73
Evaluating the Resistance to Slow Crack Growth (SCG) of a Sharply Notched PE Specimen	73
Resistance to Pressure Surges	74
Reaction to Occasional Pressure Surges	75
Reaction to Frequently Occurring Pressure Surges	75
Other Engineering Properties	76
Mechanical Properties	76
Resistance to Rapid Crack Propagation	79
Abrasion Resistance	79
Thermal Properties	80
Coefficient of Expansion/Contraction	80
Thermal Conductivity	81
Specific Heat	81
Material Classification Properties	81
Density	82

Melt Index	82
Flexural Modulus	83
Tensile Strength at Yield	83
Color and UV Stabilization	84
Electrical Properties	85
Static Charge	85
Chemical Resistance	85
Permeability	88
Properties Related to Durability	90
Weatherability	90
Stabilization	90
Biological Resistance	91
Properties Related to Health and Safety Concerns	92
Toxicological	92
Health Effects	92
Flammability	92
Combustion Toxicity	93
References	93
Appendix A: Pipe Pressure Rating (PR) And Pressure Class (PC)	95
Appendix B: Apparent Elastic Modulus	99
Appendix C: Allowable Compressive Stress	102
Appendix D: Poisson's Ratio	102
Appendix E: Thermal Properties	103
Appendix F: Electrical Properties	103

## **Chapter 4      PE Pipe and Fittings Manufacturing**

Introduction	105
Raw Materials Description	106
Extrusion Line	107
Raw Materials Handling	107
Extrusion Basics	108
Extruders	110
Breaker Plate/Screen Pack	110
Die Design	110
Pipe Sizing	112
Cooling	114
Pullers	114
Take-off Equipment	114
Saw Equipment and Bundling	115
Injection Molded Fittings	115
Fabricated Fittings	118
Thermoformed Fittings	119
Electrofusion Couplings	119
Injection Molded Couplings	119

Quality Control/Quality Assurance Testing	121
Workmanship, Finish, and Appearance	121
Dimensions	122
Physical Property Tests	122
Quality Assurance Summary	123
References	123
<b>Chapter 5</b>	<b>Standard Specifications, Standard Test Methods and Codes for PE (Polyethylene) Piping Systems</b>
Introduction	125
Standard Requirements for PE Piping Materials	126
Standard PE Piping Material Designation Code	129
Standard Equation for Determining the Major Stress Induced in a Pressurized Pipe	130
Standard Diameters	132
PE Pipe Standards are Simplified by the Use of Preferred Values	132
Determining a PE's Appropriate Hydrostatic Design Stress (HDS) Category	134
Determining the Appropriate Value of HDS	135
A Widely Recognized Source of HDS Recommendations	138
Standard Specifications for Fittings and Joints	139
General	140
Codes, Standards and Recommended Practices for PE Piping Systems	141
Plastics Pipe Institute ( PPI)	141
ISO	143
NSF International	143
AWWA	144
Standard Plumbing Codes	145
Other Codes and Standards	146
Factory Mutual	146
References	147
Appendix 1	148
Gas Pipe, Tubing and Fittings	150
Installation	152
<b>Chapter 6</b>	<b>Design of PE Piping Systems</b>
Introduction	155
Section 1	<b>Design Based on Required Pressure Capacity</b>
Pressure Rating	157
Pressure Rating for Fuel Gas Pipe	160
Pressure Rating for Liquid Flow Surge Pressure	161
Controlling Surge Pressure Reactions	167

Section 2	<b>Hydraulic Design of PE Pipe</b>	168
	Pipe ID for Flow Calculations	168
	Flow Diameter for Outside Diameter Controlled Pipe	168
	Pipe Diameter for ID Controlled Pipe	169
	Fluid Flow in PE Piping	169
	Head Loss in Pipes – Darcy-Weisbach/Colebrook/Moody	169
	Pipe Deflection Effects	172
	Head Loss in Fittings	173
	Head Loss Due to Elevation Change	174
	Pressure Flow of Water – Hazen-Williams Equation	175
	Pipe Flow Design Example	176
	Pressure Flow of Liquid Slurries	177
	Particle Size	177
	Solids Concentration and Specific Gravity	178
	Critical Velocity	178
	Compressible Gas Flow	182
	Empirical Equations for Low Pressure Gas Flow	183
	Gas Permeation	184
	Gravity Flow of Liquids	185
	Manning Flow Equation	186
	Comparative Flows for Slipliners	188
	Flow Velocity	189
	Pipe Surface Condition, Aging	190
Section 3	<b>Buried PE Pipe Design</b>	191
	Calculations	192
	Installation Categories	193
	Design Process	194
	Earth, Live, and Surcharge Loads on Buried Pipe	195
	Vertical Soil Pressure	195
	Earth Load	196
	Live Load	197
	AASHTO Vehicular Loading	198
	Impact Factor	199
	Vehicle Loading through Highway Pavement (Rigid)	199
	Railroad Loads	204
	Surcharge Load	205
	Installation Category 1: Standard Installation - Trench or Embankment	210
	Pipe Reaction to Earth, Live, and Surcharge Loads	210
	Ring Deflection	210
	Apparent Modulus of Elasticity for Pipe Material, E	212
	Ring Stiffness Constant, RSC	212
	Modulus of Soil Reaction, E'	213
	Soil Support Factor, F <sub>S</sub>	215
	Lag Factor and Long-Term Deflection	216

	Vertical Deflection Example	217
	Deflection Limits	217
	Compressive Ring Thrust	219
	Allowable Compressive Stress	220
	Ring Compression Example	220
	Constrained (Buried) Pipe Wall Buckling	220
	Luscher Equation for Constrained Buckling Below Ground Water Level	221
	Constrained Buckling Example	223
	Installation Category #2: Shallow Cover Vehicular Loading	224
	Shallow Cover Example	225
	Installation Category #3: Deep Fill Installation	226
	Compressive Ring Thrust and the Vertical Arching Factor	227
	Earth Pressure Example	228
	Ring Deflection of Pipes Using Watkins-Gaube Graph	229
	Example of the Application of the Watkins-Gaube Calculation Technique	232
	Moore-Selig Equation for Constrained Buckling in Dry Ground	232
	Critical Buckling Example	233
	Installation Category #4: Shallow Cover Flotation Effects	233
	Design Considerations for Ground Water Flotation	234
	Unconstrained Pipe Wall Buckling (Hydrostatic Buckling)	238
	Ground Water Flotation Example	240
Section 4	<b>Thermal Design Considerations</b>	242
	Strength and Stress/Strain Behavior	242
	Thermal Expansion/Contraction Effects	243
	Unrestrained Thermal Effects	243
	End Restrained Thermal Effects	244
	Above Ground Piping Systems	245
	Buried Piping Systems	245
	Appendix A.1	249
	Appendix A.2	253
	Appendix A.3	261
<b>Chapter 7</b>	<b>Underground Installation of PE Piping</b>	
	Introduction	265
	Flexible Pipe Installation Theory	266
	Terminology of Pipe Embedment Materials	266
	Engineered and Simplified Installation Guidelines for PE Pipe	268
	Simplified Installation Guidelines for Pressure Pipe	268
	Simplified Step-by-Step Installation	269
	Trenching	269
	De-watering	269
	Bedding	269

Placing Pipe in Trench	270
Pipe Embedment	270
Leak Testing	270
Trench Backfill	270
Engineered Installation Guidelines for PE Pipe	271
Deflection Control	271
Deflection Limit	273
Pipe Embedment Materials	273
Classification and Supporting Strength of Pipe Embedment Materials	274
Strength of Embedment Soil	274
Embedment Classification Per ASTM D-2321	274
Class I and Class II	274
Migration	275
Cement Stabilized Sand	276
Class III and Class IVA	277
Class IVB and Class V	277
Compaction of Embedment Materials	277
Density Requirements	277
Compaction Techniques	278
Compaction of Class I and II Materials	279
Compaction of Class III and IV Materials	280
Density Checks	280
Trench Construction	280
Trench Width	281
Trench Length	282
Stability of the Trench	282
Stability of Trench Floor	283
Stability of Trench Walls	284
Portable Trench Shield	285
Installation Procedure Guidelines	286
Trench Floor Preparation	287
Backfilling and Compaction	289
Backfill Placement	289
Sunlight Exposure	291
Cold (Field) Bending	291
Installation of Pipe in Curves	292
Transition from PE Pressure Pipe to Gasket Jointed Pipe	292
Proper Burial of Fabricated PE Fittings	293
Inspection	295
References	295
Appendix 1	296
Appendix 2	296
Appendix 3	300

<b>Chapter 8</b>	<b>Above-Ground Applications for PE Pipe</b>	
	Introduction	305
	Design Criteria	306
	Temperature	306
	Pressure Capability	307
	Low Temperature Extremes	307
	Expansion and Contraction	308
	Chemical Exposure	308
	Ultraviolet Exposure	309
	Mechanical Impact or Loading	309
	Design Methodology	310
	Pressure Capability	310
	Expansion and Contraction	311
	Installation Characteristics	314
	On-Grade Installations	314
	Free Movement	315
	Restrained Pipelines	316
	Supported or Suspended Pipelines	320
	Support or Suspension Spacing	320
	Anchor and Support Design	323
	Pressure-Testing	324
	References	326
<b>Chapter 9</b>	<b>PE Pipe Joining Procedures</b>	
	Introduction	327
	General Provisions	327
	Thermal Heat Fusion Methods	327
	Butt Fusion	328
	Butt Fusion of PE Pipe Products with Different Wall Thicknesses	329
	Optional Bead Removal	329
	Saddle/Conventional Fusion	330
	Socket Fusion	331
	Equipment Selection	332
	Square and Prepare Pipe	332
	Heating	332
	Joining	332
	Cooling	333
	Electrofusion (EF)	333
	Heat Fusion Joining of Unlike PE Pipe and Fittings	335
	Mechanical Connections	335
	Mechanical Compression Couplings for Small Diameter Pipes	336
	Stab Type Mechanical Fittings	336
	Mechanical Bolt Type Couplings	337
	Stiffener Installation Guidelines	338

Flanged Connections	340
PE Flange Adapters and Stub Ends	340
Flange Gasket	343
Flange Bolting	343
Flange Assembly	344
Special Cases	344
Mechanical Flange Adapters	345
Solid DI Sleeve Connections to PE pipe	345
PE Pipe Connection to DI or PVC Bell End	347
PE Bell Adapters to DI or PVC Pipe End	347
DI Valve with PE Ends	348
Dismantling Joint	348
Mechanical Joint (MJ) Adapters	349
Transition Fittings	349
Mechanical Joint Saddle Fittings	351
Restraint Methods	352
Wall Anchor	352
Mechanical Restraint Anchor	353
Buried Poly Anchor	354
Above Ground Pipeline Anchor	354
PE to PVC Slip-Joint Anchor Fitting	355
References	356

## **Chapter 10 Marine Installations**

Introduction	359
Selection of an Appropriate Pipe Diameter	362
Determination of the Required DR or SDR	362
Determination of the Required Weighting, and of the Design and the Spacing of Ballast Weights	363
Maximum Weighting that Allows Weighted Pipe to be Floated into Place	363
Determining the Maximum Weighting that Still Allows PE Pipe to Float	365
Determining the Required Minimum Weighting for the Anchoring of a Submerged Pipe in its Intended Location	365
Ensuring that the Required Weighting shall not be Compromised by Air Entrapment	367
Determining the Spacing and the Submerged Weight of the Ballasts to be Attached to the Pipe	368
Design and Construction of Ballast Weights	369
Selection of an Appropriate Site for Staging, Joining and Launching the Pipe	371
Preparing the Land-to-Water Transition Zone and, when Required, the Underwater Bedding	372
Assembly of Individual Lengths of PE Pipe Into Long Continuous Lengths	372

Mounting the Ballasts on the Pipe	373
Launching the Pipeline into the Water	374
Submersion of the Pipeline Using the Float-and-Sink Method	377
Completing the Construction of the Land-to-Water Transition	381
Post-Installation Survey	381
Other Kinds of Marine Installations	381
Winter Installations	381
Installations in Marshy Soils	382
Water Aeration Systems	382
Dredging	382
Temporary Floating Lines	383
References	384
Appendix A-1	384
Appendix A-2	386
Appendix A-3	392

## **Chapter 11 Pipeline Rehabilitation by Sliplining with PE Pipe**

Introduction	397
Design Considerations	398
Select a Pipe Liner Diameter	399
Determine a Liner Wall Thickness	399
Non-Pressure Pipe	399
Pressure Pipe	403
Other Loading Considerations	403
Determine the Flow Capacity	404
Design the Accesses	406
Develop the Contract Documents	409
The Sliplining Procedure	409
Other Rehabilitation Methods	417
Swagelining	418
Rolldown	418
Titeliner	418
Fold and Form	418
Pipe Bursting	418
Pipe Splitting	418
References	419

## **Chapter 12 Horizontal Directional Drilling**

Introduction	421
PE Pipe for Horizontal Directional Drilling	422
Horizontal Directional Drilling Process	422
Pilot Hole	422
Pilot Hole Reaming	423
Drilling Mud	423

Pullback	424
Mini-Horizontal Directional Drilling	424
General Guidelines	424
Geotechnical Investigation	426
Geotechnical Data For River Crossings	426
Summary	427
Product Design: PE Pipe DR Selection	427
Design Considerations for Net External Loads	428
Earth and Groundwater Pressure	430
Stable Borehole - Groundwater Pressure Only	430
Borehole Deforms/Collapse with Arching Mobilized	431
Borehole Collapse with Prism Load	432
Combination of Earth and Groundwater Pressure	433
Live Loads	433
Hydrostatic Buckling or Collapse	434
Ring Deformation	434
Performance Limits	434
Performance Limits of HDD Installed Pipe	434
Viscoelastic Behavior	434
Ring Deflection (Ovalization)	435
Ring Deflection Due to Earth Load	436
Unconstrained Buckling	437
Wall Compressive Stress	438
Installation Design Considerations	439
Pullback Force	440
Frictional Drag Resistance	441
Capstan Force	442
Hydrokinetic Force	443
Tensile Stress During Pullback	444
External Pressure During Installation	449
Resistance to External Collapse Pressure During Pullback Installation	450
Bending Stress	450
Thermal Stresses and Strains	451
Torsion Stress	451
References	452
Appendix A	452
Appendix B	457

## **Chapter 13 HVAC Applications for PE Pipe**

Introduction	463
Ground Source Heat Pump Systems	463
Types of Ground Heat Exchangers	464
Pipe Specifications and Requirements	466

Pipe Joining Methods	466
Pipe Installation	467
Pressure Testing Ground Heat Exchanger	468
Solar Applications	469
Features and Benefits	470
Collector Technologies	470
Precautions	471
Installation	472
References	472

## Chapter 14

### Duct and Conduit

Introduction	473
Conduit Specifications	473
Applications	474
Advantages of PE Conduit	474
Installation	475
Features	475
Material Selection	476
Physical Properties	476
Cell Classification	476
Other Important Physical Properties	477
Stabilization	478
Colorants for Conduit	478
Design Considerations	479
Conduit vs. Pipe	479
Cable Dimension Considerations	479
Conduit Wall Determination	480
Installation Method vs. Short-Term and Long-Term Stress	481
Below Ground Installations	482
Open Trench / Continuous Trenching	482
Direct Plow	483
Conduit Network Pulling	484
Horizontal Directional Bore	485
Installation Methods	486
General Considerations	486
Mechanical Stress	486
Pulling Tension	486
Bending Radii	486
Underground Installation	487
Trenching Methods	487
Open Trench/Continuous Trench	487
Digging the Trench	488
Plowing	489
Plowing Variations	489

Directional Bores	490
Installation into Existing Conduit	490
Above Ground/ Aerial	491
Installation	491
Joining Methods	492
Introduction	492
General Provisions	493
Mechanical Fittings	493
Barbed Mechanical Fittings	494
Threaded Mechanical Fittings	494
Compression Fittings	494
Expansion Joints	494
Heat Fusion	495
Butt Fusion Joining	495
Socket Fusion Joining	495
Electrofusion Joining	495
Repair Operations	496
Cable Installation	496
Pulling Cable into Conduit	496
Cable Blowing or Jetting	497
Cable Installed by the Conduit Manufacturer (Cable-in-Conduit)	498
Friction in Conduit Systems	498
Definitions	498
Friction Reduction	498
Field Effects of Friction	500
Placement Planning	501
Special Applications	502
Corrugated Duct	502
Bridge Structures	503
Underwater	503
Premise (Flame Retardant)	503
Electrical/Building Code (Conduit Entry Issues)	504
Armored (Rodent and Mechanical Protection)	505
Multi-Cell Conduit	505
References	506
Appendix A	506

## **Chapter 15    General Guidelines for Repairing Buried PE Potable Water Pressure Pipes**

Introduction	515
Natural Gas Polyethylene Piping Systems	516
Municipal and Other Polyethylene Piping Systems	517
Temporary Field Repairs with Full Circle Band Clamp	517
Permanent Field Repairs	518

Small Field Repairs	518
Saddle Fusion Repair	518
Electrofusion Patch Repair	519
Mechanical Fitting Repair	519
Large Field Repairs	521
Mechanical Fitting Repair	521
Repairs with Solid Sleeves	522
Flange Adapter Spool Repair	524
Electrofusion Spool Repair	526
Stiffener Installation Guidelines	528
Restraint Methods	530
Mechanical Repair Fitting Restraint	530
Mechanical Coupling Restraint	531
Repair Clamps	533
Squeeze-off	533

## **Chapter 16 Pipe Bursting**

Introduction	535
History	536
Pipe Bursting and Trenchless Pipe Replacement Systems	537
Pneumatic Bursting Systems	537
Static Bursting Systems	538
Pipe Splitting	539
Pipe Reaming	540
Impactor Process	540
Old Pipe Material	541
New Pipe Material	541
When is Pipe Bursting a Preferred Solution?	542
Pipe Bursting Project Classification	544
Pipe Bursting Applicability and Limitations	545
Design Considerations	546
Pre-design Phase	546
Design Phase	548
Utility Survey	548
Investigation of Existing Pipe and Site Conditions	549
Insertion and Pulling Shaft Requirements	549
Soil Considerations in Pipe Bursting	550
Maximum Allowable Operating Pressure (MAOP)	551
Risk Assessment Plan	551
Ground Movement Associated with Pipe Bursting	553
Plans and Specifications	556
Submittals	557
Quality Control/Quality Assurance Issues	557
Dispute Resolution Mechanisms	558

Maximum Allowable Tensile Pull	558
Permitting Issues	561
Typical Bidding Form For a Pipe Bursting Project	562
Selection of Pipe SDR	563
Construction Considerations	565
Typical Pipe Bursting Operation Layout	566
Shoring The Insertion and Pulling Shafts.	567
Matching System Components to Reduce Risk of Failure	568
Toning for Utilities	568
By Pass Pumping Considerations	569
Dewatering Considerations	569
Ground Movement Monitoring Program	569
Pipe Connection to the Manhole	570
Pipe Connection to Other Pipes	573
Pipe Bursting Water Mains	573
Service Connections	574
Groves on the Outside Surface of the Pipe	576
As-Built Drawing	577
Contingency Plan	578
Safety Considerations	578
Cost Estimating	578
Potential Problems and their Possible Solutions	580
References	582
<b>Glossary</b>	585
Organizations and Associations	602
Abbreviations	609
<b>Index</b>	611
