

RX, CX & RD Series Relays for GC-Pro

Agrowtek offers a line of relays and contactors designed to be connected to the GrowControl™ system's low-voltage outputs. The GrowControl™ system is powered by a regulated 24Vdc wall power supply. This power supply operates the controller cpu, touch screen (if equipped,) sensors, and the relays connected to the controller's outputs.

The RX, RD and CX relays switch power from a wall outlet or circuit panel to devices such as lights, fans, pumps, etc.

RX & CX Series Relays for GC-Plus

Agrowtek's RX and CX contactors give expanded capabilities to the GC-Plus control system allowing it to switch heavy current loads or higher voltage loads such as 240V for lighting applications.

To use RX or CX products with the GC-Plus, simply add a trigger cord kit to the desired product.

RX1 can be trigger operated by the GC-Plus with RX-T Trigger Cord Kit

CX series contactors can be trigger operated by the GC-Plus with the CX-T Trigger Cord Kit.
