

RD Series Relays

Agrowtek's RD series relays feature 4, 6, 8, or 12 individual dry-contact relays designed for interfacing low-voltage GrowControl™ outputs with custom relay/contactor electrical panels in greenhouses, HVAC systems, chillers, vent/shade motor controllers, electrical circuits up to 5A@120VAC and more. Any device or circuit which can be operated by a dry contact can be controlled by an RD relay.

Operating Custom Relays & Contactors

RD4 Relay

24Vdc input terminals
from GrowControl™

RD12 Relay

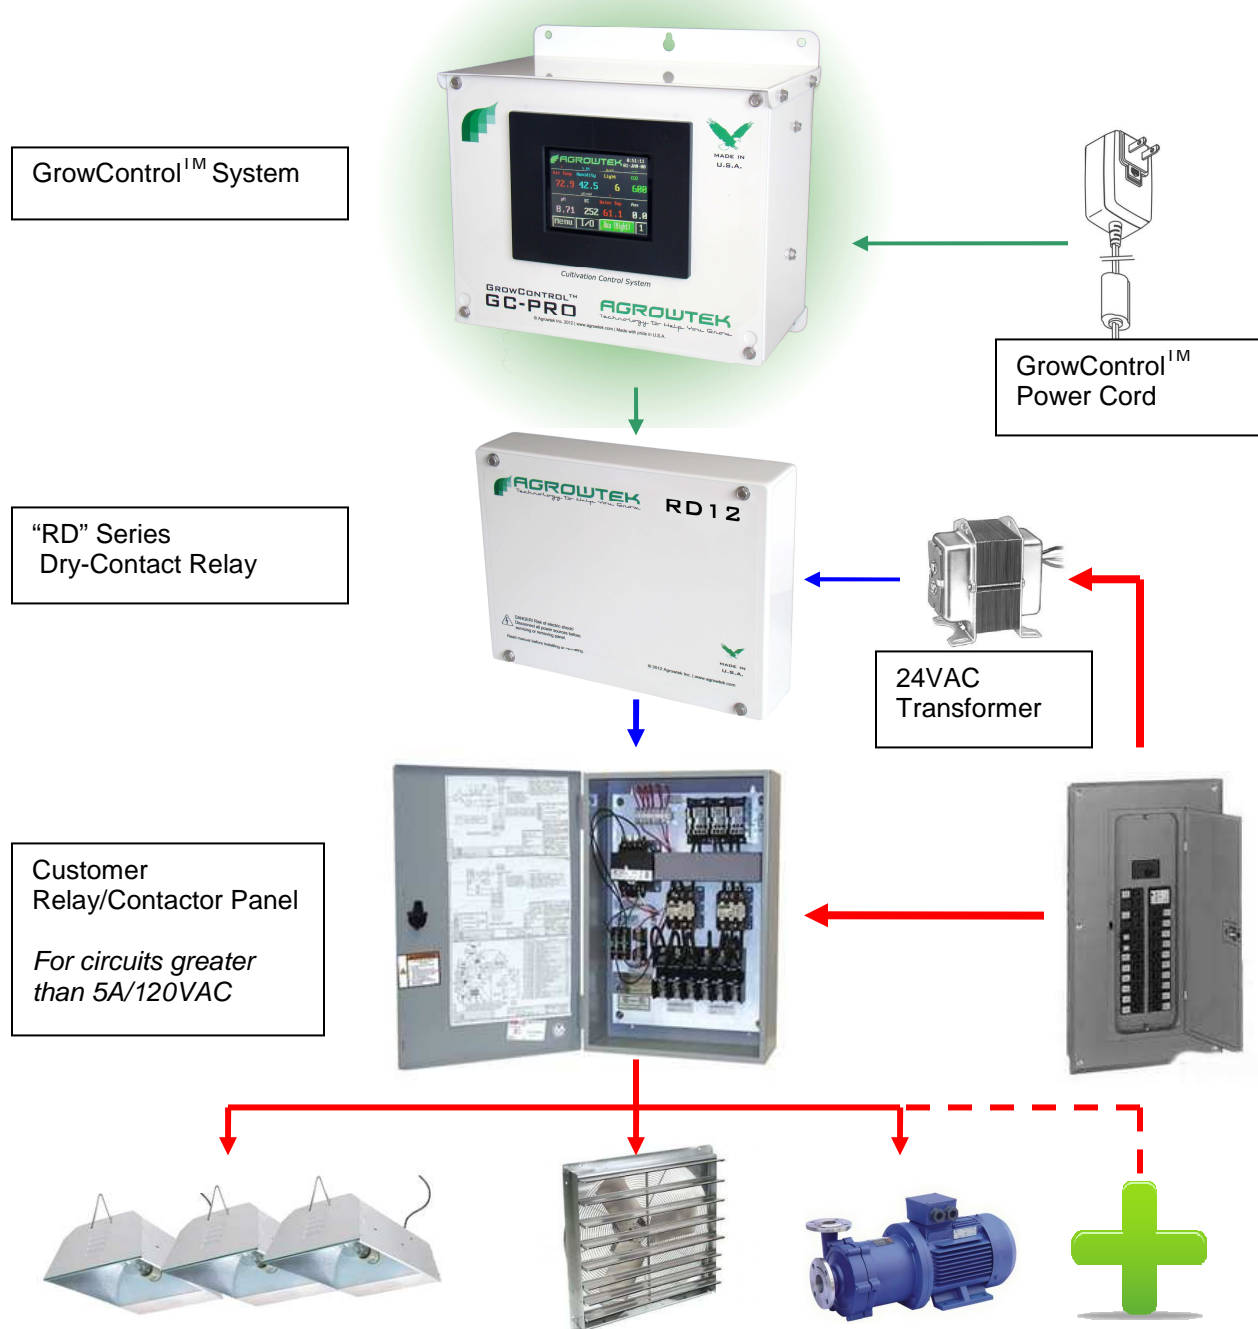

"Dry Contact" switching terminals

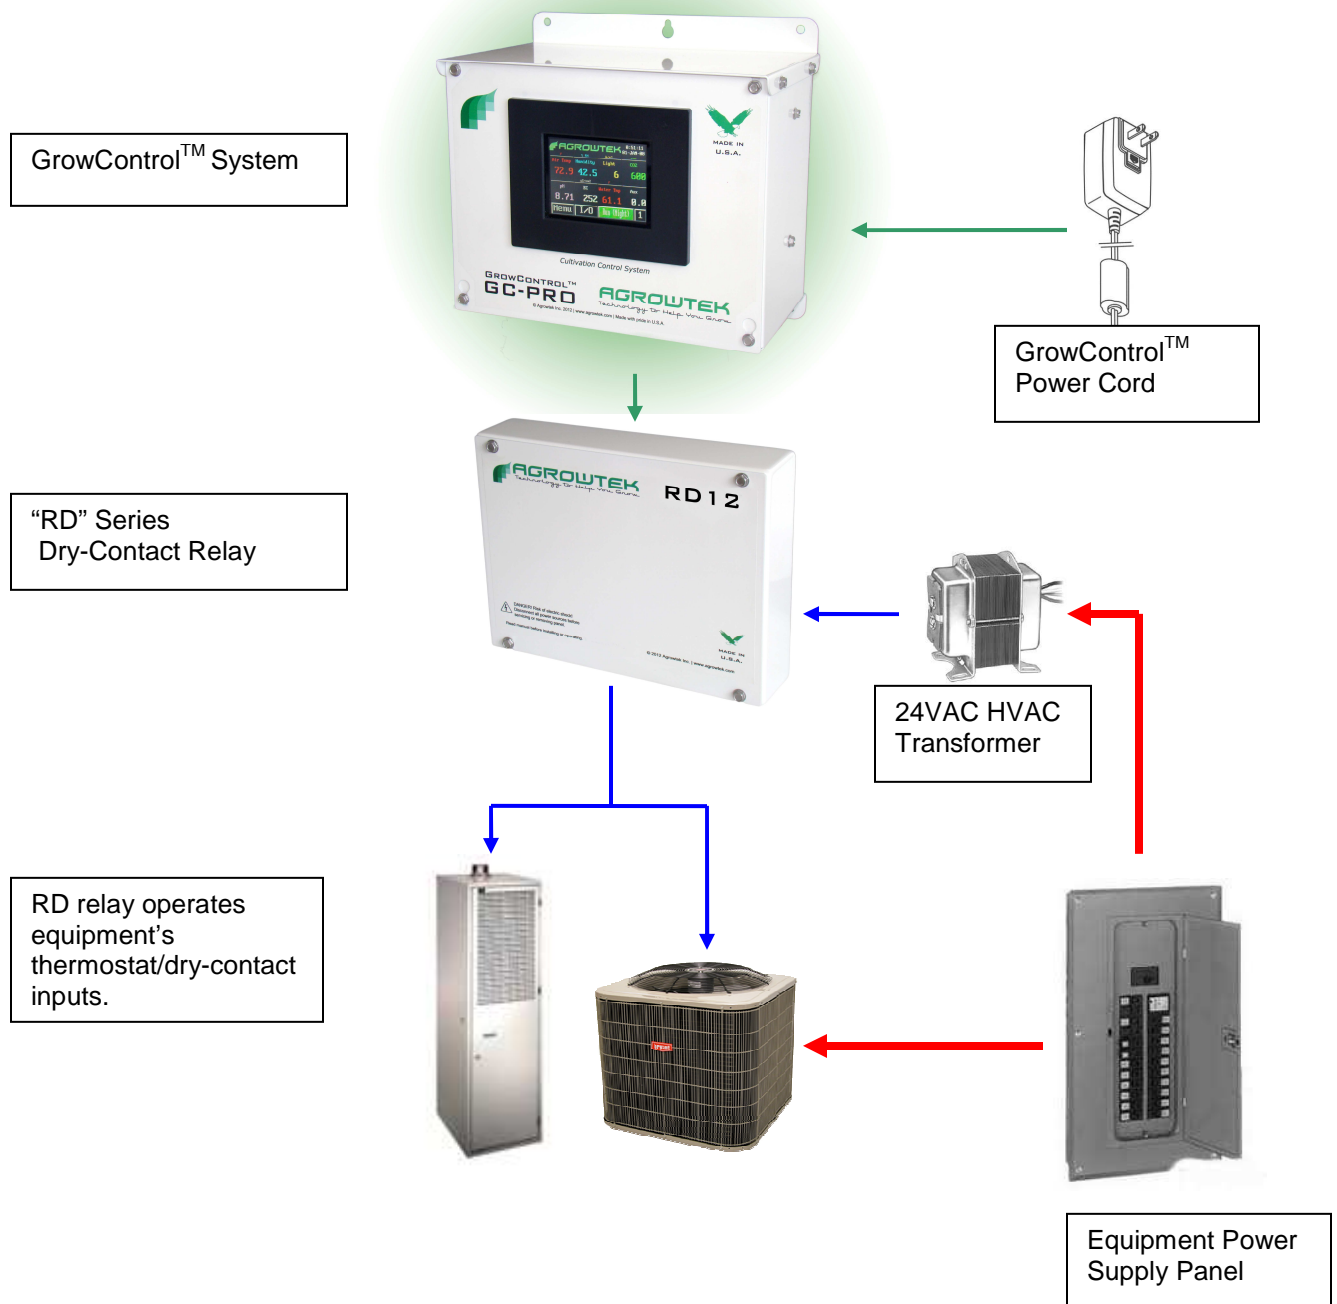

Custom relay/contactor electrical panels can be connected to the GrowControl™ system with RD series relay interfaces.

Operating Custom Relays & Contactors

HVAC heating and cooling systems can be controlled just like using a thermostat by utilizing a set of dry-contacts in a RD relay.

Operating HVAC Equipment

Vent, shade and curtain motor controllers can be connected and controlled by RD series relays.

Operating Vent/Shade/Curtain Motor Controllers
