

Microdust Pro Plugin for Casella Insight Database Software

Introduction

The Casella Microdust Pro real Time Dust Monitor is now able to download to the Casella Insight Database Management System software program.

Stored data in the memory of the Microdust unit can be transferred to Insight for viewing, graphing and making final reports all in a single unified database software package that is easy to use and manipulate.

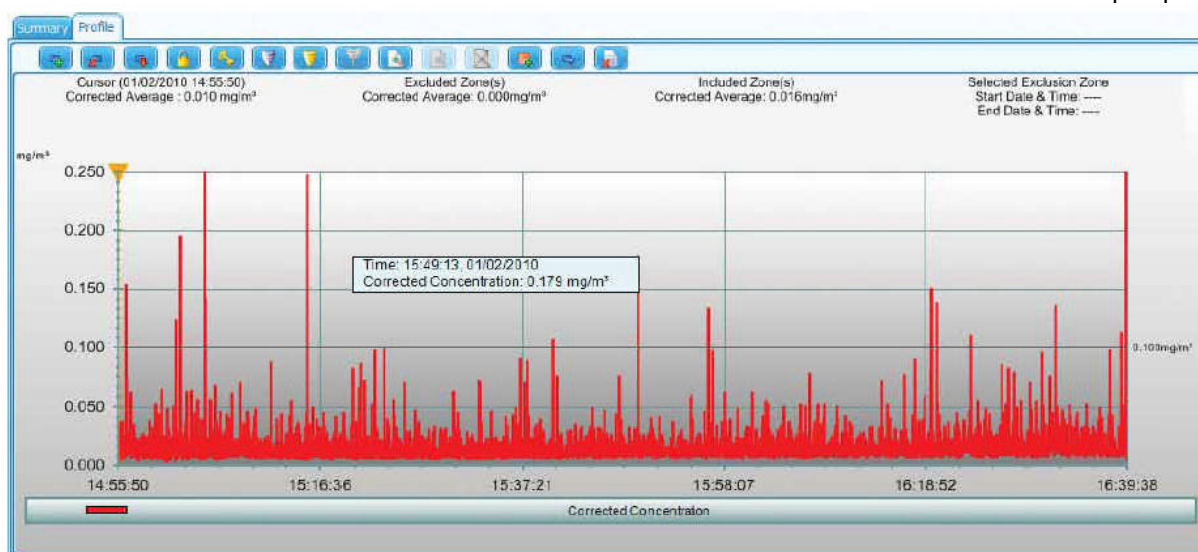

This Plugin can be installed with any others that are available to link all instrument measurements together for a complete industrial hygiene report.

Microdust Pro
real time dust monitor

Key benefits

- Download results to single software package
- Include specific calibration corrections for dust other types
- See when high concentration levels occurred
- Apply exclusion zones to graph to recalculate overall concentration value
- Save individual calibration certificates for all instruments in use with forward reminders
- Allocate measurements to specific locations or people
- Incorporate real time readings from MDP with results from Casella pumps

time history graph of dust concentrations shown in Insight software

Applications

Casella Insight can be used to store downloaded results from single or multiple Microdust monitors. All result sets are searchable by start date and time. Change graph scaling and

color schemes to suit required report. Include real time dust results with other gravimetric personal sampling pump measurements for complete picture of hazard. Export table of

results to external spreadsheets for further data processing and manipulation. Easily create professional reports and save in a wide variety of popular formats such as pdf, rtf, xls, etc.
