# WeatherHawk<sup>™</sup> Weather Station for Home Weather, Education, Home Automation, Recreational, Environmental, and Industrial Applications

The WeatherHawk weather station is designed for easy installation and use by consumers, educators, students, and resource managers. WeatherHawk is ideal for applications where ease of installation and use are key factors. WeatherHawk is preprogrammed to provide simple meteorological data, including the complex calculation of ETo (evapotranspiration) typically used for landscape and crop management. WeatherHawk also conforms to many existing home automation protocols.

The WeatherHawk weather station uses Internet-compatible Virtual Weather Station software. It is supplied fully assembled. The assembly includes meteorological sensors, and a protective case that houses the on-board microprocessor, rechargeable battery pack and spread spectrum radio transceiver. The battery is recharged via AC power or a solar panel. The WeatherHawk weather station and solar panel are easily attached to a 1<sup>1</sup>/<sub>4</sub>" to 2" O.D. pole (optional or user-supplied).

The WeatherHawk on-board microprocessor automatically measures the sensors, then stores the data in an on-board data logger before transmitting the data to a user-supplied remote PC. A spread spectrum radio is supplied to connect to the PC and receive transmissions from the WeatherHawk weather station. With typical line-of-sight conditions the WeatherHawk spread spectrum radio can transmit over distances of up to one-half a mile.

User installation is as simple as 1-2-3-4:

- 1-Remove the WeatherHawk from the shipping box (no assembly required).
- 2-Install the WeatherHawk and solar panel on the user-supplied pole.
- 3-Attach the RF400 Spread Spectrum Radio to a serial port on the usersupplied Host PC.
- 4-Install Virtual Weather Software and turn on the WeatherHawk weather station switch.

Within minutes, a typical user can begin monitoring weather information directly on the Host PC, and remotely over the Internet.

#### WeatherHawk measures:

- Air Temperature
- Solar Radiation
- Relative Humidity
- Rainfall
- Barometric Pressure
- Wind Direction
- Wind Speed

# WeatherHawk calculates:

ETo using the Industry Standard (ASCE Standardized reference)

### WeatherHawk Virtual Weather Station software is:

- PC compatible with 32-bit Windows operating system
- Internet compatible with optional Internet edition software upgrade (requires an ISP provided Internet connection to the Host PC)

## Virtual Weather Station Software calculates:

 Dew Point • Wind Chill Heat Index

Buy on-line at: www.weatherhawk.com

WeatherHawk provides real-time weather measurements and calculates  $ET_0$  on an hourly and daily basis.

## **Specifications**

WeatherHawk 232: serial data (wired) communications WeatherHawk 916: on-board 916 MHz spread spectrum radio communications, US/Canada

WeatherHawk 922: on-board 922 MHz spread spectrum radio communications, Australia/Israel

WeatherHawk 240: on-board 2.4 GHz spread spectrum radio communications, worldwide

#### Weather Station

Temperature Range:	-40° to +122°F (-40° to +50°C)
Storage:	128 kbytes of nonvolatile Flash RAM (~32,000 data points)
Power	
Requirements:	16 to 22 Vdc
Radio Type:	Spread Spectrum
Frequencies:	916 MHz (WeatherHawk 916)
-	922 MHz (WeatherHawk 922)
	2.4 GHz (WeatherHawk 240)
PC Wireless Radio—	Campbell Scientific RF400
Dadia Tuma	Spread Speetnum

Radio Type:	Spread Spectrum
Frequencies:	916 MHz (WeatherHawk 916) 922 MHz (WeatherHawk 922) 2.4 GHz (WeatherHawk 240)
I/O Data Rate:	9600 bps
Average Current	
Drain:	<1 mA stand-by (power-saving options used), 24 mA receiving, <75 mA transmitting

#### **Power Supply (optional)**

Battery:	On-board, 0.8 Ahr lead-acid
Solar Panel:	1.6 W or 5 W

#### Antenna

Description:	Omnidirectional, ¼ wave, whip
	(fully enclosed in weatherproof
	housing)
Gain:	0 dBd
Transmission	
Range:	½ mile (0.8 km) line of sight

#### **Sensors**

3013013	
Air Temperature	
Sensor:	Thermistor
Operating Range:	-40° to +122°F (-40° to +50°C); 0 to 100% RH
Temperature	
Accuracy:	±0.9°F (±0.5°C)
Temperature	
Interchangeability:	±0.36°F (±0.2°C)
Relative Humidity Sensor:	Precision temperature corrected
Sensor.	Precision, temperature corrected, bulk polymer
RH Accuracy:	±5% for 90% to 100% RH; ±3% for 10% to 95% RH
Barometric Pressure	2
Sensor:	Piezoresistive transducer
Range:	15 to 115 kPa (4.43 to 33.96 inches of Mercury)
Accuracy:	$<\pm1.5\%$ of Full Scale Reading
	$\pm 1.5$ kPa (0° to +85°C)
	±0.443 Hg
Rain Gauge	
Sensor:	Tipping bucket
Orifice:	7.75 in <sup>2</sup> (50 cm <sup>2</sup> )
Resolution:	0.04" (1 mm)
Note: Optional hig bucket available	h accuracy (0.01"/tip), external tipping
Solar Radiation	
Sensor:	G.1.
	Silicon pyranometer
Spectral Range:	Silicon pyranometer 300 to 1100 nm
Spectral Range: Accuracy:	
	300 to 1100 nm
Accuracy:	300 to 1100 nm ±2.5% ~0.25 mV per W m <sup>-2</sup>
Accuracy: Output: Operational Range:	300 to 1100 nm ±2.5% ~0.25 mV per W m <sup>-2</sup>
Accuracy: Output: Operational Range:	300 to 1100 nm ±2.5% ~0.25 mV per W m <sup>-2</sup> 0 to 2000 W m <sup>-2</sup>
Accuracy: Output: Operational Range: Temperature Range	300 to 1100 nm ±2.5% ~0.25 mV per W m <sup>-2</sup> 0 to 2000 W m <sup>-2</sup>
Accuracy: Output: Operational Range: Temperature Range Wind Direction	300 to 1100 nm ±2.5% ~0.25 mV per W m <sup>-2</sup> 0 to 2000 W m <sup>-2</sup> :: -40° to +130°F (-40° to +55°C)
Accuracy: Output: Operational Range: Temperature Range Wind Direction Sensor:	300 to 1100 nm ±2.5% ~0.25 mV per W m <sup>-2</sup> 0 to 2000 W m <sup>-2</sup> ::-40° to +130°F (-40° to +55°C) Vane
Accuracy: Output: Operational Range: Temperature Range Wind Direction Sensor: Range:	300 to 1100 nm ±2.5% ~0.25 mV per W m <sup>-2</sup> 0 to 2000 W m <sup>-2</sup> :: -40° to +130°F (-40° to +55°C) Vane 360° mechanical, 352° electrical
Accuracy: Output: Operational Range: Temperature Range Wind Direction Sensor: Range: Linearity:	300 to 1100 nm ±2.5% ~0.25 mV per W m <sup>-2</sup> 0 to 2000 W m <sup>-2</sup> :: -40° to +130°F (-40° to +55°C) Vane 360° mechanical, 352° electrical 1%
Accuracy: Output: Operational Range: Temperature Range Wind Direction Sensor: Range: Linearity: Sensitivity:	300 to 1100 nm ±2.5% ~0.25 mV per W m <sup>-2</sup> 0 to 2000 W m <sup>-2</sup> :: -40° to +130°F (-40° to +55°C) Vane 360° mechanical, 352° electrical 1%
